

# Lego® Club

## Building social skills

Lego® Club is designed for children 5-8 years of age with Autism Spectrum Disorder (ASD), developmental or social learning difficulties. The program focuses on the development of many vital skills such as sharing, turn-taking, collaboration, conflict resolution, verbal and non-verbal communication.

Each child has a specific role and they work together to build a model. They'll have fun, explore their creativity and interact with others in a supported environment.

## What we'll work on

- **Collaboration** – by working as a group to achieve a common goal
- **Joint problem solving, sharing and turn-taking** – taking turns in different roles, working on the build together
- **Maintaining attention** – staying focused on the task to build the models
- **Verbal and non-verbal communication** – using language and non-verbal skills to express ideas and feelings
- **Conflict resolution** – working through differences for a shared aim
- **Creativity** – in coming up with a group name, building the models and free playtime
- **Fine motor skills** – for manipulating the Lego® blocks
